### Abstract

This document provides an in-depth analysis for InfoTrends' 2009 Mobile Photography End-User Survey. This study was conducted in March 2009 and a total of 1,617 qualified responses were received. This research report provides analysis on the ownership, usage, and applications for handsets with embedded cameras. It also includes a comparison between traditional camera phones and smartphones. Where appropriate, the results from this year's survey are compared with those from our 2008 study.
